Time Saving Tip for Sending e-Referrals via Medical Objects

The first step is to go to the iHealth Care Directory to establish if electronic referrals are the preferred method of communication. If so, copy the Provider Number of the Medical Specialist and enter it after their surname in your clinical software address book. Medical Objects will automatically put in the details, rather than you having to look up the Provider every time when sending a referral. This will make it easier for you to identify who you can send electronic referrals to.
